

It is very important to verify the actual working travel when this probe is set in a socket due to difference of only 0.20mm between recommended and full travel. In case that the actual working travel is over 0.60mm, the device, spring, plunger and/or PCB pad will be damaged. Therefore, the above notice must be reflected in socket design.

Pointing accuracy : ± 0.07 mm

Spring force[$\pm 20\%$]

5.3g(0.187oz) at initial travel

21.0g(0.741oz) at 0.60mm(0.0236) recommended travel

26.3g(0.928oz) at 0.80mm(0.0315) full travel
